

Rental UPS Solutions

readily available, delivered fast, fully installed

Bender UK can provide UPS rental solutions for both short or long-term requirements based on either emergency fast-response or a pre-planned program.

We have a wide range of free-standing systems ready for installation within an existing building as well as fully self-contained UPS solutions pre-built within specially adapted 10ft or 20ft shipping containers. We work closely with you to understand your needs, to ensure we provide a rental solution to suit your site, application, budget and program.

Why Rent?

Our rental UPS systems have been installed across a variety of sectors such as; banking, healthcare and data management. UPS rental is a growing market as it allows businesses to achieve UPS support quickly during a period of higher demand, failure of existing systems or during pre-planned shutdowns or refurbishments without the lead times or financial commitment of a purchase.

Renting avoids the higher capital and ongoing maintenance costs whilst providing peace of mind that equipment is fully monitored, maintained & inspected by Bender UK for a fixed monthly fee with no risk or exposure to any additional or varying costs.

By default, our rental packages include 15M of suitably rated input & output cabling, supplied and fitted by our engineers based on clear, flat and unobstructed routes. If longer cables or more specific requirements are needed, please contact to discuss.

Benefits of Containerised Solutions

Our range of containerised solutions provide a complete pre-built self-contained UPS system that is ready to deliver, connect and commission. Each container will house UPS, battery, air-conditioning, lighting & small power.

Space optimising eliminating the need for dedicated and controlled environments within data centres or plant rooms. Simply locate the container externally to utilise internal space for other critical Infrastructure. **Fast and convenient** a pre-built container is easy to transport, connect and commission for multi-site clients, fast track requirements or temporary power demands. This “off the shelf” approach provides the flexibility and speed which is demanded by today’s critical applications.

Service & Ongoing Support

Our dedicated rental UPS systems are fully serviced and periodically tested to ensure they are available and ready to deliver to support your critical load at short notice.

In addition, all our UPS rental packages will include a 24-hour call out facility with a 6 hour response to site for the entire rental period to provide complete peace of mind.

Free-standing UPS Rental Options
